

METASOL es una empresa dedicada a la fabricación de productos de calderería, equipamiento industrial, maquinaria bajo pedido y estructuras metálicas.

Nuestro ámbito de trabajo va más allá de la fabricación.

Ofrecemos un servicio completo de asesoría técnica, ingeniería, desarrollo de soluciones y asistencia post-venta.

Somos una empresa flexible y versátil capaz de adaptarnos a las necesidades de un mercado cada vez más dinámico y tecnológicamente más avanzado.

El conjunto de profesionales que forman METASOL es nuestro mayor activo y principal elemento diferenciador.

Proporcionamos soluciones personalizadas a los problemas de nuestros clientes en el ámbito del diseño industrial y la ingeniería mecánica.

## Calidad y medioambiente

Apostamos por la calidad de nuestros servicios y productos, la excelencia en el trato con nuestros clientes y proveedores y la responsabilidad social de nuestra actividad. Por ello tenemos implantados los sistemas de gestión de calidad y medio ambiente ISO:9001 e ISO:14001.

Contamos con un departamento de calidad que verifica todos los trabajos antes de ser entregados a nuestros clientes y que trabaja en implicar a toda la empresa en la mejora continua.

## Quality and environment

We rely on the quality of our services and products providing excellence in customer and providers service. We are also aware of the social responsibility of our activity. We implemented the quality and environment management systems ISO:9001 e ISO:14001.

We count with a quality department which checks all the products prior delivery to our clients and also involves the whole company in a process of continual improvement.

A large industrial facility is shown in the background, with bright sparks flying from welding or cutting operations. In the foreground, a close-up of a digital caliper is used to measure a metal part, with the number "48229" visible on its screen.

# Servicios

Ofrecemos a nuestros clientes un servicio personalizado a medida de sus necesidades.

Nuestra actividad abarca desde el diseño y desarrollo de soluciones hasta la completa fabricación y puesta en funcionamiento.

abordamos proyectos tanto de fabricación a medida según planos del cliente como proyectos llave en mano en los que el diseño e ingeniería es fundamental.

ices

vide our clients a customized  
adapted to their needs.

Activity ranges from the design and development to the complete manufacture and putting into service.

l with customized manufacturing as well as turn-key projects, in which n and engineering is crucial.

Boilermaking is the metallurgic activity based on machining and welding metal sheets and steel profiles to create products such as containers, vessels, machine pipes, metallic structures, and a long etcetera.

In METASOL we are experts in manufacturing medium boiler making parts in carbon steel and stainless steel. Not unique products but also products manufactured in series.

We own the optimum productive resources for this type of works and our Engineering Department is the perfect solution during the production.

# Engineering

Our Engineering Department can make mechanical calculations with finite elements software for the dimensioning of mechanical components.

The 3D software design allows us to approach highly complex projects, making easier the manufacture.
